

DarkX Theme for Clearspace X

Theme for ClearspaceX: DarkX

Theme files attached below as DarkX.zip.

Limitations

Works only with Clearspace X 1.2. I need to do a few tweaks to get it working in 1.3 and 1.4.

Overview

This theme uses the color scheme of Clearspace X, but with a dark twist. The default white background was changed to black with purple colors similar to the Clearspace X logo were used as highlights in text and other areas (see attached screenshot). I did this theme mostly for people to use as an example of a simple theme when writing other themes, and because it was fun to write!

Installation

- Unzip the DarkX.zip file into your jiveHome/themes directory.
- Log into the Admin console
- Navigate to System -> Settings -> Themes
- Under Global theme map, click "change global theme"
- DarkX should appear in the drop down list
- Select DarkX and click "set global theme"

Requirements and caveats

Minimal testing was done on this theme. It is known to work in Firefox with Clearspace X version 1.2 beta.

Files

- README.html
- account-success.ftl
- custom-css.ftl

More Information

Please see the readme file for more information.
