

settings.xml - For Licensed Customers and Partners

Note: this Maven configuration provides access to Jive binaries and sources via the maven-secure.jivesoftware.com server; it requires login access. See the bottom of the document where to put your login information.

Please request maven access by creating a Supportal case. If you do not have a company group, you may email your maven request to accountsupport@jivesoftware.com

Where to Put This

VERY IMPORTANT: you need to put this in ~/.m2/ if you are on Unix/Mac or in your user home/.m2 directory ("C:\Documents and Settings***your username***\.m2") on Windows. See [How-To: Install Maven](#) for more information if this doesn't make sense.

If you don't put settings.xml in the right location, Maven won't find your dependencies. This is the #1 reason people experience Maven issues.

Alternatively, you can run Maven with a command line switch pointing to settings.xml in a different location, like this:

```
mvn -s C:\Jive\maven\settings.xml
```

The File

```

<?xml version="1.0"?>
<settings>
  <profiles>
    <profile>
      <id>jive.archiva</id>
      <activation>
        <activeByDefault>>true</activeByDefault>
      </activation>
      <repositories>
        <repository>
          <id>jive.internal</id>
          <name>Jive's Repository</name>
          <url>http://maven-secure.jivesoftware.com/archiva/repository/jive.internal</url>
        </repository>

        <repository>
          <id>jive.snapshots</id>
          <name>Jive's Repository</name>
          <url>http://maven-secure.jivesoftware.com/archiva/repository/jive.snapshots</url>
        </repository>
      </repositories>

      <pluginRepositories>
        <pluginRepository>
          <id>jive.internal</id>
          <name>Jive's Repository</name>
