My forums are operating very slowly...

It can take quite awhile for some parts of the pages to come up:

<http://www.vegasmessagelboard.com/vmb/forum.jsp?forum=61>

The server is not the problem... It is running 85% idle CPU with lots of free RAM. JBoss/Jetty has been given 800MB max heap, which it is not even close to reaching.

Any ideas why things are running so slowly?

The DB is postgres 7.2.1, vacuumed nightly. Thanks!

My guess would be that one of your cache sizes is too low. Go into the admin tool and check to see if any of the caches look full -- if they do, increase the cache.

If that doesn't fix it, let us know and we can help you debug further.

Regards,

SLOW Forum

Matt

My message cache was red, so I increased it. Now it is about 77% free, but still only getting about 54% effectiveness...

Also, thread query is about 30% effective.

Other than that, the caches are very effective.

Are you still having speed issues?

Regards,

Matt

The speed has improved, but it is still "slow" in my opinion...

The message and thread query caches are still getting below 70% effectiveness... It seems like they should be higher...

SLOW Forum

If you'd like, send me login info for the admin tool on your site by email, and I can take a look at your cache sizes to see what might be going on.

Regards,

Matt
