Are there any recommended HTML editors to use with Jive? Frontpage puts too much too much junk to the code.

Chris

For the most part we just use smart text editors (e.g. notepad++ <http://notepad-plus.sourceforge.net/uk/site.htm>)

If you want a gui-based or wysiwyg editors, you'll probably have to deal with the code they insert in the html no matter which you use.

Cheers,

Chase
