I would **LOVE** it if there were an iPhone optimized interface for Clearspace. Something like this... Hint, it's the [Clearfox](#) plugin adapted for iPhone

I'd be happy to do it if I had an iPhone. If you want, I could probably make a killer [Nokia 3650](#) interface, since that's what I have right now. 😊

Seriously though, the [Clearfox plugin](#) would be a great starting point for anyone that wants to build an iPhone interface to Clearspace.

Cheers,

AJ

That's the spirit! Maybe before I create the iPhone interface plugin I'll create a paypal fundraising plugin. 😊

Hi Aaron,

Is Jive making any headway on this effort?

Actually you can access the clearfox content from your iPhone by going there right now through

<http://www.jivesoftware.com/community/cf-view.jspa>

Which is the same page that clearfox is using behind the scenes. I just tried it on my iPhone and it seems to work pretty well. Maybe we could add a better url to access it or something though.

Jon, that link does not work any more... (<http://www.jivesoftware.com/community/cf-view.jspa>)

Any news about mobile plug-ins?

Marcello

Hey Marcello,

iPhone Optimized Clearspace page

Thanks for letting us know about your interest in mobile. It is definitely something we plan to address. Do you have specific requirements for mobile functionality?

Thanks,

Greg
