Hello,

I am writting one plugin where I want to add one link inside ADMIN=>System=>Settings. I am able to generate this but on action of this link i want to show one jsp which is I am not able to. It given popup to save/open jsp file. If I use ftl file to render UI then some of the resource messages are not coming properly. e.g community tab display name is coming like this **admin.decorator.menu.settings.space**. Can somebody tel me whats going wrong here. Do I need to add any resource bundle in my plugin.

Did you alter or add to the ui-components.xml file at all?

Hello,

I havent altered the ui-component.xml directly, i have written following code in plugin.xml

```
<components>
  <component id="admin-console">
    <tab id="system" >
      <section id="section-global-settings" >
        <item id="settings-custommenu" name="custom menu" url="custom-menu.jspa"
description="Click to manage custom menu" />
      </section>
    </tab>
  </component>
</components>
```

clearspace plugin to generate admin Ui

```
</section>
</tab>

</component>

</components>
```

and i have written xwork-plugin.xml like this,

```
<package name="custommenu" namespace="/admin" extends="community-admin-default">
  <action name="custom-menu"
class="com.jivesoftware.clearspace.plugin.action.CustomMenuAction">
    <result name="success" type="freemarker">/plugins/metadata/resources/settings-
custommenu.ftl</result>
  </action>
</package>
```

Please help me out....

Thanks

So the link shows up with this code, but clicking on it will generate a JSP download instead of opening a new page?
