

Migration from jiveForum(IS) to...

Hi All

We want to migrate the jive Forum (Integrated Server Gold Jive Forums 5.0.5 / Jive Knowledge Base 1.7.5) to clearspacex 2.0.4.

For that, we had planned to migrate it first on clearspacex 1.10.7 then upgrade it to clearspacex 2.0.4 as clearspacex 2.x does not have the import/export functionality. And also the integrated server does not have higher/later version.

Now we find that the database is modified, i.e. it is not the default database any more. The changes we have found between the changed database and the default database are as follows:

These tables have some modification.

jiveAttachement
jiveAvatarUser
jiveProfilefieldoption
jiveQuestion
jiveProfile
jiveversion

These tables are created on existing database

Migration from jiveForum(IS) to...

jiveCommunity

jiveCommunityAppvr

jiveCommunityProp

jiveDraft

jiveDraftPorp

jivelinkobject

jiveobjectTag

jivetag

I tried the following - I removed all the changes/modification done on it, now we have the database in default mode without any changes (with the help of SQL delta tool). Now when I tried to migrate this Jive Integrated server gold 5.0.5 to clearspacex 1.10.7, it runs the importing process for some time (23 minutes 23 seconds) and after that hang up.

I have attached the snap-shot of importing process & also the log file.

Please go through it & suggest some way, so that we can do the migration successfully.

Can you please provide the following:

- The rest of your Jive logs at the time of the upgrade

Migration from jiveForum(IS) to...

- Your application server information and logs
- Your database and JDBC driver information
- Your JVM parameters

Thanks,

Vinh
