Hi folks,

i experienced a problem when using the Database Migration-Tool in CS 2.5.1.

I migrated to an MS-SQL-Server (from MY-SQL) and got primary-key exceptions all over the place (e.g creating a document, user registration...).

So, creating the first of anything failed, but after that, CS seems to be working fine again.

Is there any workaround 4 this problem ?

Cheers Stephan

Hi Stephan,

Unfortunately, MS SQL Server is not supported for the 2.5.1 release so you are likely to experience some problems with your instance. We plan on having support for SQL Server built into the next patch release due some time in October.

clearspace database migration - primary...

For a list of supported components, please refer to the documentation: <http://www.jivesoftware.com/builds/docs/clearspace/latest/ClearspaceInstallGuide.html>

Regards,

Karl
