

JDBC Connection lost every morning.

Mohammed King 1 posts since

Nov 21, 2008

Hi all,

Would anyone happen to know why a jdbc connection will be dead every morning? Everything is fine all day but in the morning the server needs to be restarted.

Database settings in jive_startup.xml

```
<database>
  <!-- Uncomment to enable Unicode support when using MySQL -->
  <!-- <mysql><useUnicode>true</useUnicode></mysql> -->
  <!-- Uncomment to enable Statement caching when using Oracle JDBC -->
  <!-- <oracle><useStatementCache>true</useStatementCache></oracle> -->
  <defaultProvider>
    <username>xxxuser</username>
    <maxConnections>75</maxConnections>
    <minConnections>10</minConnections>
    <serverURL>jdbc:mysql://xxxserver:3306//xxxdb?autoConnect=true</serverURL>
    <driver>com.mysql.jdbc.Driver</driver>
    <connectionTimeout>0.3</connectionTimeout>
    <password>xxxpass</password>
    <checkOpenConnections>true</checkOpenConnections>
  </defaultProvider>
</database>
```

my.cnf on remote mysql server

JDBC Connection lost every morning.

[mysqld]

max_allowed_packet=16M

interactive_timeout=86400

Is anything showing up in your logs in the morning? Can you post them? Also, what version of MySQL and MySQL connector is this?
