

Documents can't be shown in my widget

dongfang.zhang@landesk.com 38 posts since

Hi

Todd,

I made a new widget, which is to show my specified documents. The functionality is the same as Popular Document Widget in

your product Clearspace Community 2.5.3.

Here are some codes in protected `Map<String, Object> loadProperties(WidgetContext widgetContext, ContainerSize size)`

```
JiveIterator<Document> documents1 = documentManager.getDocuments(community);
```

```
for(Document document: documents1){  
    Log.error("document.getID:" + document.getDocumentID());  
    Log.error("document.getID:" + document.getPlainSubject());  
}
```

```
properties.put("documents", documents1);  
properties.put("container", community);  
properties.put("numResults", getNumUsersToDisplay());
```

Here is the FTL file.

```
<#include "/template/docs/include/doc-macros.ftl">  
<#if containerSize == enums['com.jivesoftware.community.widget.Widget$ContainerSize'].SMALL>  
    <#if (documents?exists && documents.hasNext())>  
        ${"FreeMarker 1"}  
        <@jive.jiveContentListSidebar content=documents limit=numResults />  
    <#else>  
        ${"FreeMarker 2"}
```

Documents can't be shown in my widget

```
<@jive.jiveEmptyContentListSidebar container=container showThreadLink=false showBlogPostLink=false/>
</#if>
<#else>
<#if (documents?exists && documents.hasNext())>
  ${FreeMarker 3}
  <@jive.jiveContentList content=documents showContainer=isRoot limit=numResults />
<#else>
  ${FreeMarker 4}
  <@jive.jiveEmptyContentList container=container showThreadLink=false showBlogPostLink=false/>
</#if>
</#if>
```

Here is what I get from the Widget.

Here is the log from the widget

17:25:42,729 [http-8080-3] ERROR com.jivesoftware - document.getID:DOC-1502

17:25:42,729 [http-8080-3] ERROR com.jivesoftware - document.getID:The
ldgetservicepermormanceinfo crashes on XP workstation with no paging file

I think I have already found the documents, but it can't be rendered to the FTL file.

Thanks & Regards,

Aaron

Hi Aaron,

Are any of your other variables (container, numResults) making it across correctly?

Documents can't be shown in my widget

Hey Todd,

New code in widget

```
for(Document document: documents1){
    Log.error("document.getID:" + document.getDocumentID());
    Log.error("document.getPlainSubject:" + document.getPlainSubject());
}

Log.error("community ID:" + community.getID());
Log.error("community getDisplayName:" + community.getDisplayName());
Log.error("numResults:" + getNumUsersToDisplay());
```

```
properties.put("documents", documents1);
properties.put("container", community);
properties.put("numResults", getNumUsersToDisplay());
```

New log information

com.jivesoftware - document.getID:DOC-1502

com.jivesoftware - document.getPlainSubject:The Idgetservicepermormanceinfo crashes on XP workstation with no paging file

com.jivesoftware - community ID:2002

com.jivesoftware - community getDisplayName:service

com.jivesoftware - numResults:10

So I think there are no problem with all the parameters.

This issure is very emergency.

Now please help me to find the cause or give me a workaround.

Documents can't be shown in my widget

Thanks & Regards,

Aaron

Hi Todd,

After comment all the codes for debugging(such as Log.infor(), Log.error()), everything is fine.

That is really really strange.

Thanks & Regards,

Aaron
