Can users update their status via email with Clearspace 2.5.6? If so, what do we need to do to configure it?

Hello Angelique,

This isn't something that is available out of box; however, I could file a feature request for this if you'd like.

We've had users request this, as well as request a way to sync up their Facebook status with their Jive status.

It would be great if this was a standard capability like emailing responses to discussion forums.

Thanks! Angelique

Update status via email

Angelique, It looks like you can already do this with the [Advanced Email Plugin](#)

Emailing the status email address will update your user's status based on the email's subject line.

In a future release, we're planning on integrating the Advanced Email Plugin into the core product, but in the mean-time you'll want to look into using the plugin for this.
