

MASSIVE Upload of users to Jive SBS

Hi,

in Production environment we will need to pre-charge in Jive SBS thousands of users, in order for the SSO to work properly. That said, is there a form to do a massive upload without uploading them manually one by one in Admin Panel?

For example, through a CSV file or something like this.

Or an Xml. We read something about this point in this thread [XML Import - Users](#) but there is no clear information in it.

Where to find information about this topic?

Marcello

Marcello,

We do not currently have any built-in facilities for doing a massive upload of contacts, but we do offer a REST/SOAP services layer for programmatically automating this kind of work. You'll want to take a look at the UserService that I linked to you yesterday.

MASSIVE Upload of users to Jive SBS

Thanks,

Austen

Hi Austen,

are you referring to this document? <http://www.jivesoftware.com/jivespace/docs/DOC-1200>.

In this document I can see that multiple queries to JiveUser table can be made, is this the block referring to user creation?

Type Template

<...> <creationDate>xs:dateTime</creationDate> <email>xs:string</email> <emailVisible>xs:boolean</emailVisible> <en

Thanks.

Marcello

The two REST methods available for creating users are the createUser and createUserWithUser:

MASSIVE Upload of users to Jive SBS

http://www.jivesoftware.com/builds/docs/jive_sbs_public/latest/developer/RestServicesReference.html#UserService_createUser_String_String_String

http://www.jivesoftware.com/builds/docs/jive_sbs_public/latest/developer/RestServicesReference.html#UserService_createUserWithUser_WSUser

Ok, that's clear.

Another question we have about this point: using the createUser and createUserWithUser services, we can provide not-encrypted password and then Jive will encrypt these password, is that right?

So if username is "user01" and password is "userpassword01" through the createUser service we can send these values:

- user01
- userpassword01

Hey Marcello,

MASSIVE Upload of users to Jive SBS

That is correct, we salt and hash the password before we save it.
