

User Self registration screen -...

[scordis](#) 424 posts since

Dec 16, 2007 When a user self registers - I have set up the system to allow the admin to approve new requests. What I would also like to do is modify the page so that I can ask them to use a specific convention for signing up - like using email addresses for usernames for example.

Hey Phil,

Sure, you should be able to do this fairly easily. Just let me know which page specifically you are looking at and I can give you some details about how to edit the page. Thanks.

Alright, so the template you'd need to modify would be this one:

/template/global/create-profile.ftl

User Self registration screen -...

and here are some instructions detailing simple theming customizations that you can do:

<http://www.jivesoftware.com/jivespace/docs/DOC-3406>

Hope that helps! Thanks.

I was hoping that that was not going to be your recommendation - I did look at the customisation methodology via the Resource kit previously and it was a bit over my head! ;-)

Yeah, unfortunately this is the easiest way to modify the look and feel of a specific page in the application.
