

# Cannot call custom rest web service...

I have a rest web service class that is configured in one our plugins.

It works correctly when deployed to our development environment but when we try and deploy to locally using cargo I get a response

```
<data contentType="null" contentLength="0"><![CDATA[]]></data>
```

I have checked the following option `jive.ws.disabled` is set to false:

```
<jive.ws.disabled>>false</jive.ws.disabled>
```

```
<jive.devMode>>true</jive.devMode>
```

The plugin is deployed correctly I can see it in the admin console. Also Rest webservices are enabled and allow anonymous users to call it.

Any ideas as what this might be the. The same request on our development environment works.

Hello,

Cannot call custom rest web service...

Would you give me the code to the plugin, and instructions to reproduce this issue? What version of clearspace/SBS are you running?

Thanks,

Kevin
