

# force users to follow a space?

I would like to force or at least make the default that members of a space automatically are following that space -- any way of doing this? Intent is that anything posted to this specific space will cause all members to get an email notification which they can opt out of desired, but default is that they get it.

Hey Christian,

There is no built-in functionality to do this, but it's possible to do this through a customization via plugins.

Thanks,

Vinh
