Using the test hosted version of SBS when importing a users photo into the system this became the users avatar. What do we need to change in order to make this happen with our live environment.

Hi,

Which version are you running in your live environment?

Apologies - I've worked out why thats not the case. I needed to go into the Admin console/ People/Avatar settings and turn on Enable Avarats for all registered users, and then put a '1' in the maximum uploaded avatars per user to get it working.

Hello,

So did that take care of the problem? Is this still an issue?

Avatar not displaying imported photo.

Thanks,

Kevin
