Antivirus Protection — *for Jive communities*

Safe collaboration

The Jive Antivirus Module provides virus protection for Jive-n and Jive-x communities, bridging the gap between an active online community and a safe IT environment. You can give employees and customers the freedom necessary to effectively share and collaborate, while ensuring that security isn't compromised. And you can focus on your community and its members, rather than the latest virus.

Comply with corporate security standards

If you work in finance, healthcare or another regulated industry, you need to ensure that your social business initiative passes muster with your compliance organization. The Jive Antivirus module helps address the antivirus requirements stipulated by regulatory legislation such as HIPAA, GLBA, and SOX, as well as NIST, FFIEC, COBIT, and ISO 17799 security standards and guidelines. The Antivirus module adds support for asynchronous scanning of all file attachments, immediate deletion of infected files and optional e-mail notification when a virus is detected.

Hosted or on premise: *you're covered*

If you're a hosted customer, you'll be covered through the Jive managed and maintained ClamAV scan server. If you have deployed the platform on premise, you provide your own scanner; the module is compatible with both ClamAV as well as McAfee with ICAP support.

Compatibility

This module is compatible with the following Jive products and versions:

- Jive-n Custom version 4.5.1 and above.

- Jive-x Custom version 4.5.1 and above.

Licensing

This module is a paid option. Please contact your Jive account representative for more information or email us at sales@jivesoftware.com. In addition, you can find information and discussions about the module in our community at community.jivesoftware.com.
